Subject Index

Alumina submicron powder production
by turbulent flow aerosol, 47
Attrition
of high-density polyethylenes, 243

Ball mill operations
effect of interstitial and circumambient gas in fine powders on scaling-up of powder-handling apparatus as illustrated by, 147
Behaviour of coal particles
suspended in coal liquids, 15
Binding agents
to enhance fluidized bed gas cleaning, 267

Capture and rebound of dust
in granular bed filters, 253
Cellulose
microcrystalline; investigation of moisture sorption in, using sorption isotherms and dielectric response, 237
Channels
converging and diverging; theory of flow of particulate solids in, based on a conical yield function, 229
Chromatography
dry powder; exploration of, 217
Classification performance
effects of particle dispersion and circulation systems on, 275
Coal liquids
behaviour of coal particles suspended in, 15
Coal particles
suspended in coal liquids, behaviour of, 15
Comparison of generic inversion algorithm
for characterizing particle size distributions, 79
Conical yield function
theory of flow of particulate solids in converging and diverging channels based on, 229

Dielectric response and sorption isotherms
use of, in investigation of moisture sorption in microcrystalline cellulose, 237
Distributions
linear and/or areal grade, solutions to transformation equation for volumetric grade distribution from, 55
volumetric grade, solutions to transformation equation for, from linear and/or areal grade distributions, 55
Dry powder chromatography
exploration of, 217
Dust
capture and rebound of, in granular bed filters, 253

Effect of interstitial and circumambaient gas
in fine powders on scaling-up of powder-handling apparatus as illustrated by ball mill operations, 147
Effects of particle dispersion and circulation systems
on classification performance, 275
Equation of state
for fluidized beds, wave velocity based on a new, 77
Erosion wear
in slurry pumps and pipes, 35
Exploration of dry powder chromatography, 217

Fineparticle characterization
aspects of predictions affecting efficiency of microbiological mining techniques, 177
Flow of particulate solids
in converging and diverging channels based on a conical yield function, theory of, 229
Flow patterns
of granular solids in cylindrical vessels, measurement and prediction of, 65
of particles in freeboard of a vortexing fluidized bed, 121
Fluidized bed
gas cleaning, binding agents to enhance, 267
gas and solid discharge from, using a jet pump, 111
vortexing; particle flow pattern in freeboard of, 121
wave velocity based on a new equation of state for, 77
Freeboard of a vortexing fluidized bed
particle flow pattern in, 121

Gas
interstitial and circumambient; in fine powders; effect on scaling-up of powder-handling apparatus as illustrated by ball mill operations, 147
Gas and solid discharge
from a fluidized bed using a jet pump, 111
Gas–solid systems
hydrodynamics of semifluidization in, 25
Generic inversion algorithm
for characterizing particle size distributions, comparison of, 79
Granular bed filters
capture and rebound of dust in, 253
Granular materials
optimal performance of shape classifier for binary mixtures of, 137

Harold Heywood, the man and his work, 295
Helical ribbon powder agitator
theory of mechanics of, 1
High-density polyethylenes
attrition of, 243
Hydrodynamics
of sedimentation of multisized particles, 201
of semifluidization in gas–solid systems, 25

© Elsevier Sequoia/Printed in The Netherlands

Improving scale-up procedures
for pneumatic conveying design, 281
Inclined vibrating plate
sorting of particles by, 103
Investigation of moisture sorption
in microcrystalline cellulose using sorption isotherms and dielectric response, 237

Jet pump
gas and solid discharge from a fluidized bed using a, 111

Measurement
and prediction of flow patterns of granular solids in cylindrical vessels, 65
of static stresses on wall of cylindrical container for particulate solids, 163
Mechanics of helical ribbon powder agitator, theory of, 1
Microbiological mining techniques
fineparticle characterization aspects of predictions affecting efficiency of, 177
Mixtures
binary, of granular materials; optimal performance of shape classifier for, 137
Moisture sorption
in microcrystalline cellulose using sorption isotherms and dielectric response, investigation of, 237
Morphology and structure
the science of form applied to particle characterization, 93

Optical measurement
of liquid-borne particles, recent developments in, 221
Optimal performance of shape classifier
for binary mixtures of granular materials, 137

Particle characterization
structure and morphology — the science of form applied to, 93
Particle dispersion and circulation systems
effects of, on classification performance, 275
Particle flow pattern
in freeboard of a vortexing fluidized bed, 121
Particle size distributions
comparison of generic inversion algorithm for characterizing, 79
Particles
coal, suspended in coal liquids, behaviour of, 15
liquid-borne; recent developments in optical measurement of, 221
multisized; hydrodynamics of sedimentation of, 201
sorting of, by inclined vibrating plate, 103
Photocentrifuges, 193
Pneumatic conveying design
improving scale-up procedures for, 281
Powder(s)
alumina; production of, by turbulent flow aerosol, 47
fine; effect of interstitial and circumambient gas in, on scaling-up of powder-handling apparatus as illustrated by ball mill operations, 147
industrial submicron, size classification of, by a virtual impactor, 155
Powder-handling apparatus
effect of interstitial and circumambient gas in fine powders on scaling-up of, 147

Recent developments in optical measurement
of liquid-borne particles, 221

Scale-up
of powder handling apparatus, effect of interstitial and circumambient gas in fine powders on, 147
procedures for pneumatic conveying design, improvment of, 281
Sedimentation
of multisized particles, hydrodynamics of, 201
Semifluidization
in gas–solid systems, hydrodynamics of, 25
Shape classifier
for binary mixtures of granular materials, optimal performance of, 137
Size classification
of industrial submicron powder by a virtual impactor, 155
Slurry pumps and pipes
erosion wear in, 35
Solid and gas discharge
from a fluidized bed using a jet pump, 111
Solids
granular, in cylindrical vessels; measurement and prediction of flow patterns of, 65
particulate; theory of flow of, in converging and diverging channels based on a conical yield function, 229
Solutions to transformation equation
for volumetric grade distribution from linear and/or areal grade distributions, 55
Sorption
isotherms and dielectric response, use of, in investigation of moisture sorption in microcrystalline cellulose, 237
of moisture in microcrystalline cellulose; investigation of, using sorption isotherms and dielectric response, 237
Sorting of particles
by inclined vibrating plate; analysis of motion of particles on an inclined vibrating plate, 103
Static stresses
on wall of cylindrical container for particulate solids, measurement of, 163
Structure and morphology
the science of form applied to particle characterization, 93
Submicron alumina powder production
by turbulent flow aerosol, 47

Theory of flow of particulate solids
in converging and diverging channels based on a conical yield function, 229
Theory of mechanics of helical ribbon powder agitator, 1

Transformation equation
for volumetric grade distribution from linear and/or areal grade distributions, solutions to, 55
Turbulent flow aerosol
production of submicron alumina powder by, 47

Virtual impactor
size classification of industrial submicron powder by, 155

Wave velocity
based on a new equation of state for fluidized beds, 77
